

Physician Advisor Review

Clinical Collaboration. Optimal Care.

Our professional peer reviewers respond with expert and timely determinations, in response to requests from first-level UR clinicians and primary physician reviewers. Available in all jurisdictions, our peer review solutions incorporate medical professionals in a broad span of specialties.

The depth of specialties available empowers true peer-to-peer reviews for medical conditions that go beyond the expertise of primary level physicians. Our physician reviewers are all Board-Certified and/or AME/QME/IME-qualified, with workers' compensation experience.

Strategic Technology

Ahshay® is the proprietary, state-of-the-art tool that manages our peer review process. This web-based system is secure, interactive and completely paperless. All documents received to support reviews, as well as determination letters, are available online any time to UR staff and EK Health clients. The Ahshay® Express Approval module is an adjuster approval portal through which determination letters are distributed. The Ahshay® system maintains time and date stamps on all reports distributed for proof of services.
